# DANE AMATO

Working with DJ's Property Services was an exciting opportunity for us to showcase our skills and creativity. Our team was tasked with creating a new brand identity and website for the company, and we were thrilled to take on the challenge.

We began by conducting extensive research and collaborating closely with DJ's Property Services to understand their values, goals, and preferences. This allowed us to create a brand identity that accurately represented their brand and captured their unique selling points. Our team worked tirelessly to design a brilliant logo that was visually appealing and conceptually sound. The final design was a result of our team's collective efforts, and it perfectly reflected DJ's Property Services' vision and personality.

With the logo in place, we moved on to designing a new website. Our team members combined their expertise and skills to create a modern, user-friendly, and visually appealing website that provided a seamless user experience. We carefully selected color schemes, graphics, and fonts to create a cohesive and consistent interface that reflected the brand identity we had created. The end result was a website that exceeded our expectations and received positive feedback from both DJ's Property Services and their clients.

I was tasked with creating an instructional assembly template for the Kano Development Kit from scratch. I designed a new template that was easy to follow, visually appealing, and provided a seamless user experience. I paid close attention to every detail to ensure that users could assemble the kit with ease. The end result was a successful new template that received positive feedback from Peers.

One of my first and well received clients.  
I used Photoshop to bring this sign to life, It  
consists of 7 parts.

Background Stamp Outer  
Background Stamp Inner  
Double Line Spacer  
Window Inner  
Title Card  
Where Card  
Time Card

These parts are individually editable so you can  
change the stamp, and text anytime they would  
wish.

I was given the task to rebrand Compliments Pumpkin Spice Cookie Boxes. For this project I examined what it meant to be a pumpkin spice product, things like leaves, pumpkin and autumn colors were all missing from there original design, I added them back, and received praise for the new design.
